I am an East Falmouth resident writing in support of the Cape Cod Country Club Solar project being developed by Pure Sky Energy. I am in strong support of increasing our solar electricity generation as we try to increase our clean energy in order to meet our climate goals. I believe this project in particular is well designed to do that. The proposed solar and battery energy storage system will contribute to energy reliability and grid stability both of which will be important as Falmouth and the Cape work to improve the local energy infrastructure. Moreover, by including some very environmentally friendly design elements in the conversion of the site from a golf course to a solar facility - native pollinator garden plantings on the site and the replanting of an area of trees in excess of those that would need to be removed - there is a net positive benefit to the biodiversity and habitat of the site. In addition, with the commitment by Blue Sky to donate the property to the Town of Falmouth, future opportunities for conservation, public access and municipal use open up to the town. I urge the Commission to approve this project which increases our clean energy generation while providing multiple additional benefits.
