Yes please submit...thank you so much

"She was not quite what you would call refined.
She was not quite what you would call unrefined.
She was the kind of person that keeps a parrot."
- Mark Twain

> Hello I am writing you in hopes of someone truly listening or hearing the reality I see from these monstrous turbines in our oceans. Have we not done enough to Mother Nature with all of our hair brain ideas? We have slaughtered whales and used and abused the ocean by throwing our trash in it and now this??? I wonder how we can even consider such a move. These monoliths have so many moving parts and in our ocean and being hammered down 30 plus feet to plug in...truly what is the matter with solar a means of energy collection without all the moving parts to hurt the sea life the birds bats and more...follow the money ...who is going to truly triumph from such things being put in our oceans where our fishermen try to make a living...it is going to affect our food chain...I have read of people being affected health wise from the vibrations of the turbines as well. Being on a fast track is totally crazy...why not wait until we have more creative people coming up with ideas not affecting sea life or having such a truly dangerous job fixing monitoring these structures...and the life span being not so very long and then what we are left with such huge eye sores as well.
> Every time we think we know and go ahead with ideas dealing with the natural world which gives us food oxygen filters our water...like DDT....we are too fast to jump to a quick fix which had we done a bit more homework and truly looked beyond the ideas which are probably being bought up by big energy as not to have something to take their thunder and money...the reason we have no trains subways or more in California is because of big business...cars...cannot we see thru this? Do we truly want to pass this on to the next generation? Gee who is about to make tons of money...and is our

> Future so dependent on such huge turbines all down the east coast? Where is the part where we ask people to be a bit participant and ask for them to please do their part and shut off lights ...hang out laundry....during the war people made sacrifices and were happy to do so in most cases and is this not a war as well? We use how much of the world's energy? Each one of us could be more responsible for helping with the energy curtailing and the future...rather than being so far removed from the problem
> And being told it is ok because we will have mechanical devices in the water creating energy because we are so wasteful in so many cases....who is thinking about their carbon footprint when these solutions which most are not thinking of the flip side of the vibrations having on whales which will be so affected as well other sea life...
> My nephew was in the Whitbread years ago and wanting not to wake a sleeping whale on the surface was told by a whale expert to just tap his ring on the steering wheel and that would be enough to warn the whales...
> If you think it will not make vibrations in the water...think again...
> How can we be so negligent in not taking all of life which supports all others aspects of life before we go ahead and so something so rash and wrong...We have not even banned round up or neoniccotinoids in this country...what is wrong with this picture?
> Besides all of that the price of this energy from turbines is the most expensive in the world...people will be really pleased about this...there are places where people will then be choosing between heat or food...really all of the money for energy ready to be released to these said turbine and so called green energy could be used to bring the price of solar down and when a panel lives its life no one has to risk life and limb to fix in the middle of a storm ....the price of solar could go down should be encourage more of this.
> Please think long and hard before making this decision to go ahead with these unnatural metal plastic oil run monoliths in our water and destroying the bed of the sea burying a cable which as the tides turn and twist will unearth at some point while the birds are chopped up ...whales and other sea life endure yet more from man kind in a not so man kind but man unfriendly invasion of the oceans all ready polluted and poisoned from all we have done so far...let it try to regenerate from all that has gone before, rather than add more upheaval ....and keep our food chain...healthy... and our world...
> Thank you for reading my thoughts...I feel this is so very important...not to start something which once in motion will not be able to be stopped...
> So think long and hard about how the outcome will affect us all and Mother Nature who has been doing her best...and all we seem to do is use and abuse our life given source.
> Just say no to handing over our natural world for someone to make money....
> Health of people planet ...all at stake...
>
